raw ↓	—	P1 telegram	—	—	—

Sideways, complexity rises left to right. Swipe up goes one period back; swipe down from Home reaches the raw telegram. There is no on-screen chrome — the gestures are the whole navigation.

Each screen below is reproduced at twice its real size, so every pixel of the design sits on a whole-number boundary and nothing is resampled. The figures are the sample reading the design was drawn against.

Electric energy consumption

This is your estimated power consumption by appliance so far in the year.

Consumption by machine, so far this year. Bars are relative to the heaviest appliance; the figure on the right is that appliance's share of the whole year, which is why the two disagree. No previous-period view.

My Energy Coach

0,84 kW

DRAWING RIGHT NOW

560 kWh estimated
for September

SO FAR IN SEPTEMBER

Instantaneous draw on the left, progress against the month's estimate on the right. This is where the panel starts.

August CLOSED

0,87 kW

AVERAGE DRAW

21,0 kWh

AVERAGE PER DAY

640 kWh estimated
for August

102% OF ESTIMATE

A closed month has no live reading, so the dial is replaced by what the month averaged. Past 100% the bar stops at the ceiling and the overshoot is told in the caption.

August Insight

21,0 kWh
AVG. DAILY

KWH A DAY

-- Average ■ Peak day

One month, day by day. The y axis ends on a round number rather than on the data, so July and August share a scale and can be compared by flicking between them.

July Insight

20,6 kWh
AVG. DAILY

KWH A DAY

-- Average ■ Peak day

2026 Insight

586 kWh
AVG. MONTHLY

KWH A MONTH

Total year 7.034 kWh

Twelve months, January first. The y axis is fixed rather than fitted, so 2025 and 2026 can be compared without the chart rescaling underneath.

2025 Insight

618 kWh
AVG. MONTHLY

KWH A MONTH

Total year 7.410 kWh

January is the year's peak here, which leaves no room above the dot — the label moves alongside it rather than being clipped.
