

PPC Smart Meter Display

as of 2026-10-02

3.5 inch · 480 × 320 · 10 screens

Sideways moves along a row, and complexity rises left to right: Appliances is a list, Compare is a judgement. **Up** goes one period back — the same screen, last month or last year. **Down from Home** reaches the raw meter output. Every line above is travelled in both directions, and there is no other way through: the panel shows no chrome, so the gestures are the whole navigation. Appliances has no previous period and the telegram hangs under Home alone, so moving sideways off the n – 1 row drops you back to the current one wherever the next column has no previous screen.

The same screens, 7 inch

as of 2026-10-02

7 inch · 800 × 480 · 10 screens · one layout, widened rather than letterboxed

Both panels are 320 design-pixels tall — the 3.5 inch one natively, the 7 inch one at 1.5× — so a single vertical rhythm serves both and only the width changes. The 7 inch panel is proportionally wider, and those extra 53 design-pixels go to whichever column already flexes: the charts grow, nothing is letterboxed, and no screen is laid out twice. The pages that follow are the 3.5 inch panel.

Electric energy consumption

This is your estimated power consumption by appliance so far in the year.

Hot Water: 1.812 kWh

22,6%

Tumble Dryer: 991 kWh

12,4%

Oven: 910 kWh

11,4%

Hob: 853 kWh

10,7%

Lighting: 729 kWh

9,1%

Consumption by machine, so far this year. Bars are relative to the heaviest appliance; the figure on the right is that appliance's share of the whole year, which is why the two disagree. No previous-period view.

50%

106 kWh

SO FAR IN OCTOBER

Instantaneous draw on the left, progress against the month's estimate on the right. This is where the panel starts.

September CLOSED

0,85 kW

AVERAGE DRAW

20,4 kWh

AVERAGE PER DAY

590 kWh estimated
for September

104% OF ESTIMATE

A closed month has no live reading, so the dial is replaced by what the month averaged. Past 100% the bar stops at the ceiling and the overshoot is told in the caption.

October Insight

21,2 kWh
AVG. DAILY

KWH A DAY

-- Average ■ Peak day

One month, day by day. October is five days old, and the bars are spaced across all thirty-one so the month keeps its true width. The y axis ends on a round number, so two months share a scale and can be compared by flicking between them.

September Insight

20,4 kWh
AVG. DAILY

KWH A DAY

-- Average ■ Peak day

2026 Insight

590 kWh
AVG. MONTHLY

KWH A MONTH

Total so far 5.306 kWh

The year so far, January first. The line stops at the last closed month and leaves the rest of the axis empty rather than drawing months that have not happened. The y axis is fixed rather than fitted, so 2025 and 2026 compare without rescaling.

2025 Insight

618 kWh
AVG. MONTHLY

KWH A MONTH

Total year 7.410 kWh

A closed year, all twelve months. January is its peak, which leaves no room above the dot — the label moves alongside it rather than being clipped.
